Introduction

The following document is the specification of the REST API for Appointment management. It includes the model definition as well as all available operations.

An Appointment is an arrangement for service provider personnel to carry out some activity at a particular time and place, typically (but not exclusively) at customer premises. It could be used to install a product service, deliver a product order item or solve a customer problem.

An appointment is previously made during a customer interaction or self-service channel and has two phases in its creation: the search for a free time slot based on given parameters and the creation of the appointment with all the necessary information. After this, the API gives the option to modify or delete the created appointment, as well, via the event architecture, it is possible to notify any change in the appointment.

SAMPLE USE CASES

Use Case Id	**UC_TMF_Appointment_001**
Use Case Name	Create a New Appointment
Summary	A Customer uses a self-service channel to create a new appointment to solve a problem with their internet service.
Actor(s)	1. Customer 2. Self-service channel
Pre-Conditions	1. The customer is already logged in the self-service channel
Begins When	All pre-conditions have been met and the customer access the module to create and appointment for service support.
Description	1. The customer access the appointment module 2. The module request and display the available timeslots for the customer 3. The customer select a proper timeslot 4. The customer provide all the information required for the appointment such as contactMedium for the contact information, relatedPlace for the place of the appointment, relatedParty for the person who is going to receive the appointment, among others. 5. The customer confirm the information and create the appointment. 6. The creation of the appointment triggers a notification to all the parts subscribed to the create appointment event.

Use Case Id	**UC_TMF_Appointment_002**
Use Case Name	Update an Appointment
Summary	A Customer calls the call center to modify an appointment
Actor(s)	1. Customer 2. Call center agent
Pre-Conditions	1. The customer already has an appointment to modify
Begins When	All pre-conditions have been met and the call center has access to the customer data in the system

© TM Forum 2026. All Rights Reserved.

Use Case Id	UC_TMF_Appointment_002
Description	1. The customer provide all the information required for the call center 2. The call center agent look for all the appointments of this customer 3. The call center agent select the appointment that should be modified 4. The call center agent modify the appointment as the customer required 5. The customer provide all the information to modify the appointment 6. The appointment is modified and this triggers a notification to all the parts subscribed to the change attribute appointment event

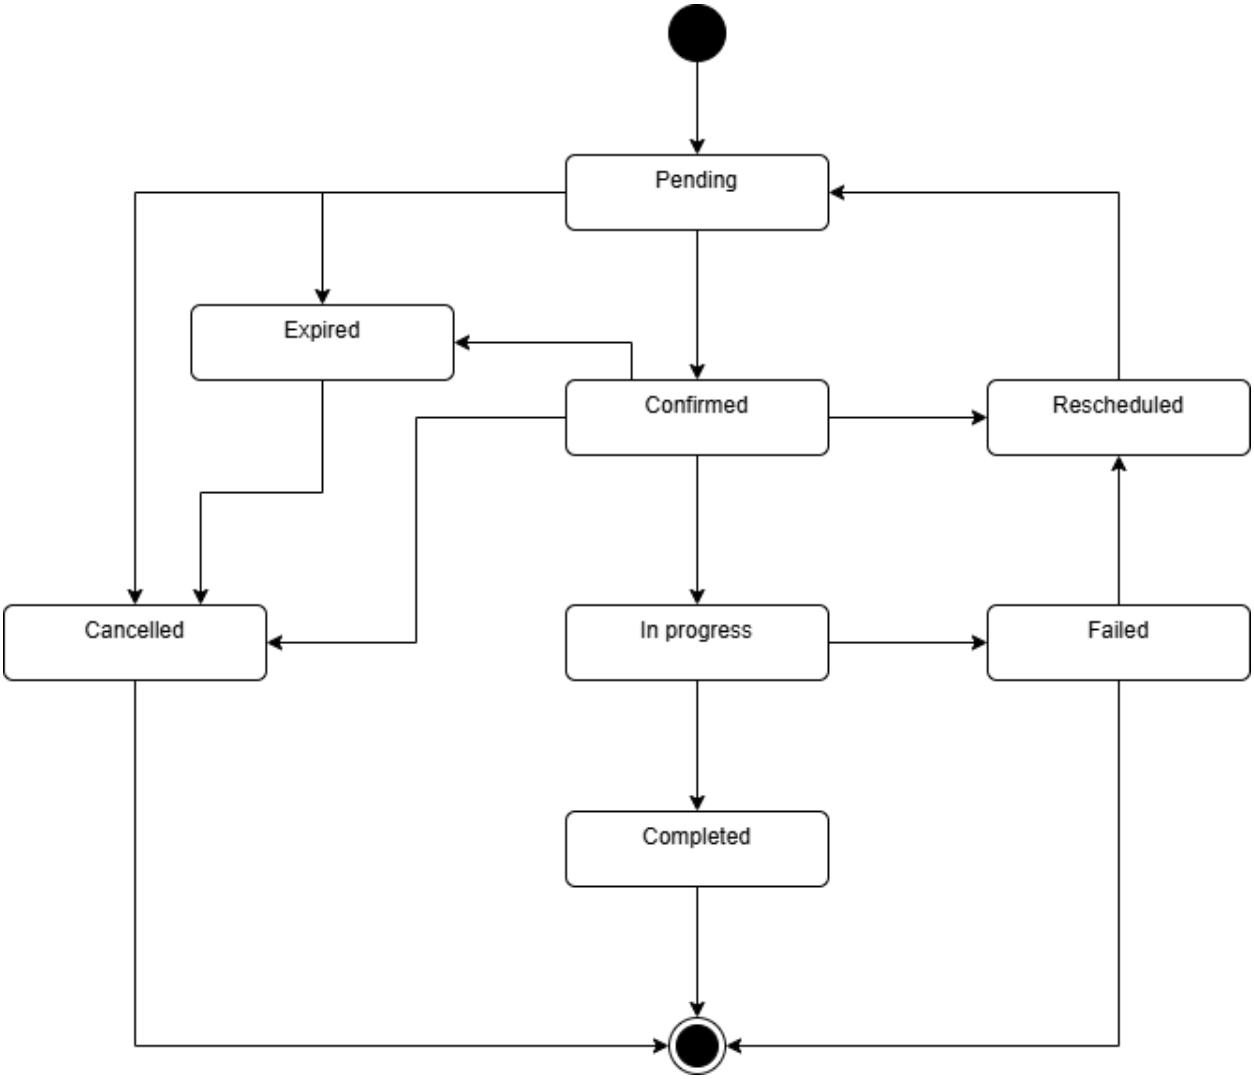

Use Case Id	UC_TMF_Appointment_003
Use Case Name	Cancel an Appointment
Summary	A Customer calls the call center to cancel an appointment
Actor(s)	1. Customer 2. Call center agent
Pre-Conditions	1. The customer already has an appointment to modify
Begins When	All pre-conditions have been met and the call center has access to the customer data in the system
Description	1. The customer provide all the information required for the call center 2. The call center agent look for all the appointments of this customer 3. The call center agent select the appointment that should be cancel 4. The call center agent cancel the appointment as the customer required 5. The appointment is cancel and this triggers a notification to all the parts subscribed to the cancel appointment event

Appointment Lifecycle States

This Lifecycle Management is responsible for managing the entire lifecycle of the Appointment. An appointment progresses through a series of states from creation to

© TM Forum 2026. All Rights Reserved.

completion. The state of an appointment indicates its current status and determines the actions that can be performed.

Pending: The appointment has been created but has not yet been Confirmed or Cancelled.

Confirmed: The appointment has been accepted and scheduled to occur.

Rescheduled: The appointment has been moved to a new date or time. A rescheduled appointment must be confirmed again before it can proceed.

In Progress: The appointment is currently being executed.

Completed: The appointment has been successfully fulfilled.

Failed: The appointment started but could not be completed successfully. It can be Rescheduled if needed.

© TM Forum 2026. All Rights Reserved.

Cancelled: The appointment has been terminated before execution.

Expired: The appointment became invalid because the required action was not completed within the allowed timeframe and it is now Cancelled.

Once an appointment reaches Completed, Cancelled or Failed (if not Rescheduled), a new appointment must be created if additional work is required.

This lifecycle ensures that appointments follow a controlled process from creation through execution while providing clear handling for cancellations, rescheduling, expiration, and execution failures.

Support of polymorphism and extension patterns

Support of polymorphic collections and types and schema based extension is provided by means of a list of generic meta-attributes that we describe below. Polymorphism in collections occurs when entities inherit from base entities, for instance a PhysicalInterventionAppointment and PhoneSupportAppointment inheriting properties from the abstract Appointment entity.

Generic support of polymorphism and pattern extensions is described in the TMF API Guidelines v3.0 Part 2 document.

The @type attribute provides a way to represent the actual class type of an entity. For example, within a list of Appointment instances some may be instances of PhysicalInterventionAppointment where other could be instances of PhoneSupportAppointment. The @type gives this information. All resources and sub-resources of this API have a @type attributes that can be provided when this is useful.

The @referredType can be used within reference entities (like for instance an AppointmentRef object) to explicitly denote the actual entity type of the referred class. Notice that in reference entities the @type, when used, denotes the class type of the reference itself, such as PhysicalInterventionAppointment or PhoneSupportAppointment, and not the class type of the referred object. However since reference classes are rarely sub-classed, @type is generally not useful in reference objects.

The @schemaLocation property can be used in resources to allow specifying user-defined properties of an Entity or to specify the expected *characteristics* of an entity.

The @baseType attribute gives a way to provide explicitly the base of class of a given resource that has been extended.

RESOURCE MODEL

Managed Entity and Task Resource Models

Appointment resource

An Appointment is an arrangement to do something or meet someone at a particular time, at a place (for face to face appointment) or in a contact medium (for phone appointment).

Resource model

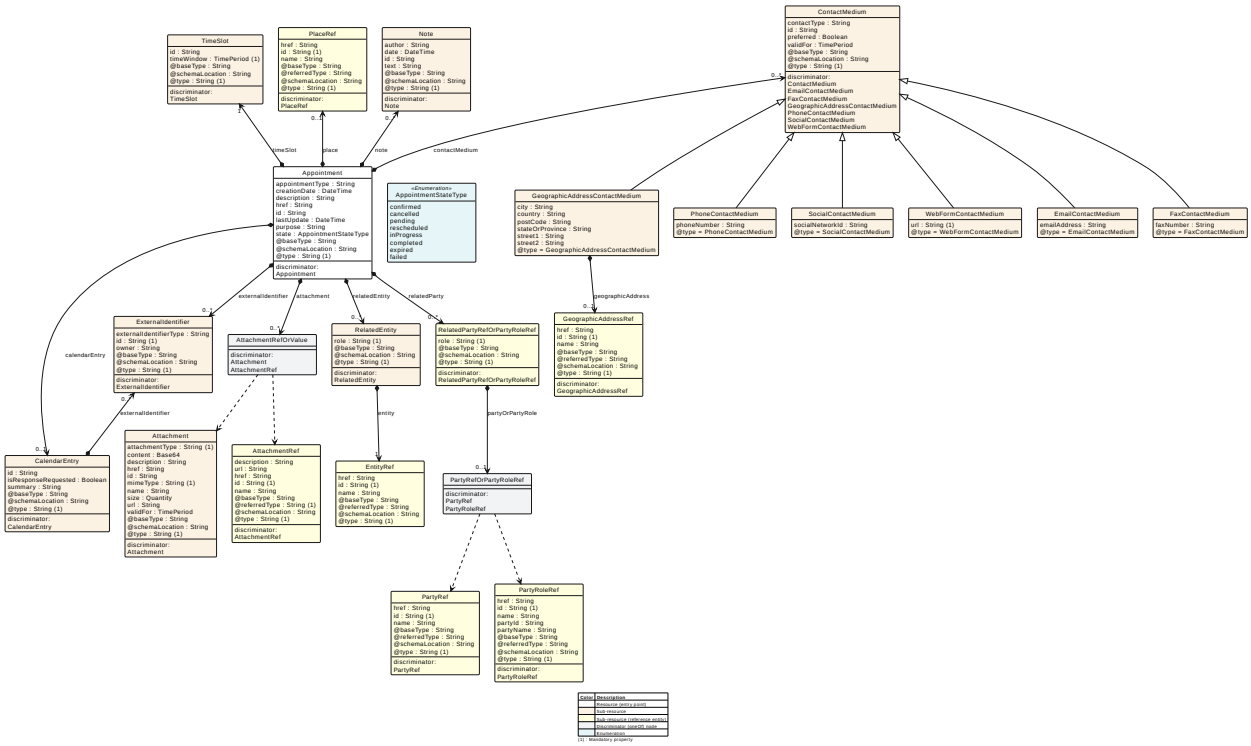

Figure 1 - Appointment

Field descriptions

Appointment fields

appointmentType	A String. Specifies the type or category of the appointment based on the nature of the scheduled activities such as: installation, repair, maintenance, consultation and so on.
attachment	An AttachmentRefOrValue [0..*]. An element (for instance a video, pictures, document) related or needed in the Appointment.

© TM Forum 2026. All Rights Reserved.

calendarEntry	A CalendarEntry. Entity created base on the SID entity CalendarEntry.
contactMedium	A ContactMedium [0..*]. Indicates the contact medium that could be used to contact the party. ContactMedium can be instantiated as * EmailContactMedium * FaxContactMedium * GeographicAddressContactMedium * PhoneContactMedium * SocialContactMedium * WebFormContactMedium
creationDate	A DateTime. Appointment creation date.
description	A String. Short free text describing the appointment.
externalIdentifier	An ExternalIdentifier [0..*]. External reference for the Appointment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. Date of last appointment update.
note	A Note [0..*]. Extra information about the Appointment.
place	A PlaceRef. A reference to a physical Place.
purpose	A String. Business category : intervention for example or to be more precise after SalesIntervention, orderDelivery Intervention,...
relatedEntity	A RelatedEntity [0..*]. A reference to an entity, where the type of the entity is not known in advance. It could be a Customer Interaction or a Service Problem from which the Appointment is being created.
relatedParty	A RelatedPartyRefOrPartyRoleRef [0..*]. A reference to the entities that may participate in the Appointment such as technician or Individual.

© TM Forum 2026. All Rights Reserved.

state	An AppointmentStateType. Valid values for the lifecycle state of the appointment. ENUMERATED with values: * confirmed * cancelled * pending * rescheduled * inProgress * completed * expired * failed
timeSlot	A TimeSlot [1].
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

Attachment sub-resource fields

Complements the description of an element (for instance a product) through video, pictures...

attachmentType	A String [1]. A business characterization of the purpose of the attachment, for example logo, instructionManual, contractCopy.
content	A Base64. The actual contents of the attachment object, embedded inline and encoded as base64. Mutually exclusive with url.
description	A String. A narrative text describing the content of the attachment.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
mimeType	A String [1]. A technical characterization of the attachment content format using an IETF Media Type, for example application/pdf or image/png. Note: this property is named mimeType for historical reasons.
name	A String. The name of the attachment.

© TM Forum 2026. All Rights Reserved.

size	A Quantity. An amount in a given unit.
url	A String. The URL pointing to the attachment content held in an external system, such as a content management system or document repository. Mutually exclusive with content.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

AttachmentRef sub-resource fields

Attachment reference. An attachment complements the description of an element (for instance a product) through video, pictures.

~~description~~	DEPRECATED A String. A narrative text describing the content of the attachment. DEPRECATED: will be removed in v6.
href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
~~url~~	DEPRECATED A String. Link to the attachment media/content. DEPRECATED: will be removed in v6.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String [1]. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

CalendarEntry sub-resource fields

© TM Forum 2026. All Rights Reserved.

Entity created base on the SID entity CalendarEntry.

externalIdentifier	An ExternalIdentifier [0..*]. Identifier assigned to the CalendarEntry by an external system in which it is created or managed.
id	A String. Unique identifier.
isResponseRequested	A Boolean. If an response is expected.
summary	A String. A summarized description or subject of the CalendarEntry.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

ExternalIdentifier sub-resource fields

An identification of an entity that is owned by or originates in a software system different from the current system, for example a ProductOrder handed off from a commerce platform into an order handling system. The structure identifies the system itself, the nature of the entity within the system (e.g. class name) and the unique ID of the entity within the system. It is anticipated that multiple external IDs can be held for a single entity, e.g. if the entity passed through multiple systems on the way to the current system. In this case the consumer is expected to sequence the IDs in the array in reverse order of provenance, i.e. most recent system first in the list.

externalIdentifierType	A String. Type of the identification, typically would be the type of the entity within the external system.
id	A String [1]. Identification of the entity within the external system.
owner	A String. Name of the external system that owns the entity.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

© TM Forum 2026. All Rights Reserved.

ContactMedium sub-resource fields

Indicates the contact medium that could be used to contact the party. This is an abstract base class, the actual value is in one of the strongly-typed subclasses : EmailContact Medium, FaxContactMedium, PhoneContactMedium, GeographicAddressContactMedium, SocialMediaContactMedium...

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.
	ContactMedium can be instantiated as * EmailContactMedium * FaxContactMedium * GeographicAddressContactMedium * PhoneContactMedium * SocialContactMedium * WebFormContactMedium
value	This property is present in subclasses

EmailContactMedium sub-resource fields

Describes an email that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
emailAddress	A String. Full email address in standard format.
id	A String. Identifier for this contact medium.

© TM Forum 2026. All Rights Reserved.

preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

FaxContactMedium sub-resource fields

Describes a fax that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
faxNumber	A String. The fax number of the contact.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

GeographicAddressContactMedium sub-resource fields

Describes a geographical address that could be used to contact a party (an individual or an organization).

city	A String. The city.

© TM Forum 2026. All Rights Reserved.

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
country	A String. The country.
geographicAddress	A GeographicAddressRef. Reference to a Geographic Address.
id	A String. Identifier for this contact medium.
postCode	A String. Postcode.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
stateOrProvince	A String. State or province.
street1	A String. Describes the street.
street2	A String. Complementary street description.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

GeographicAddressRef sub-resource fields

Reference to a Geographic Address.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

© TM Forum 2026. All Rights Reserved.

PhoneContactMedium sub-resource fields

Describes a phone number that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
phoneNumber	A String. The phone number of the contact.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

SocialContactMedium sub-resource fields

Describes a social media identifier that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
socialNetworkId	A String. Identifier as a member of a social network.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.

© TM Forum 2026. All Rights Reserved.

@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

WebFormContactMedium sub-resource fields

Describes an URL of a web form that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
url	A String [1]. Url of the web form.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

Note sub-resource fields

Extra information about a given entity.

author	A String. Author of the note.
date	A DateTime. Date of the note.
id	A String. Identifier of the note within its containing entity.
text	A String. Text of the note.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

© TM Forum 2026. All Rights Reserved.

PlaceRef sub-resource fields

A reference to a physical Place.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The specific sub-type of Place being referred to (such as a `GeographicAddress`).
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

RelatedEntity sub-resource fields

A reference to an entity, where the type of the entity is not known in advance.

entity	An EntityRef [1]. Entity reference schema to be use for all entityRef class.
role	A String [1].
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

EntityRef sub-resource fields

Entity reference schema to be use for all entityRef class.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.

© TM Forum 2026. All Rights Reserved.

@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

RelatedPartyRefOrPartyRoleRef sub-resource fields

RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.

partyOrPartyRole	A PartyRefOrPartyRoleRef.
role	A String [1]. Role played by the related party or party role in the context of the specific entity it is linked to. Such as 'initiator', 'customer', 'salesAgent', 'user'.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

PartyRef sub-resource fields

A Party reference.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. ENUMERATED with values: * PartyRef

PartyRoleRef sub-resource fields

© TM Forum 2026. All Rights Reserved.

Party role reference. A party role represents the part played by a party in a given context.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
partyId	A String. The identifier of the engaged party that is linked to the PartyRole object.
partyName	A String. The name of the engaged party that is linked to the PartyRole object.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. ENUMERATED with values: * PartyRoleRef

TimeSlot sub-resource fields

Base Extensible schema for use in TMForum Open-APIs - When used for in a schema it means that the Entity described by the schema MUST be extended with the @type.

id	A String. Unique identifier of the TimeSlot.
timeWindow	A TimePeriod [1]. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

Json representation sample(s)

We provide below a JSON representation as example of the 'Appointment' resource object.

```
{
  "@type": "Appointment",
  "id": "21",

SearchTimeSlot resource

This task resource is used to retrieve available time slots. One of this available time slot is after used to create or reschedule an appointment.

Resource model

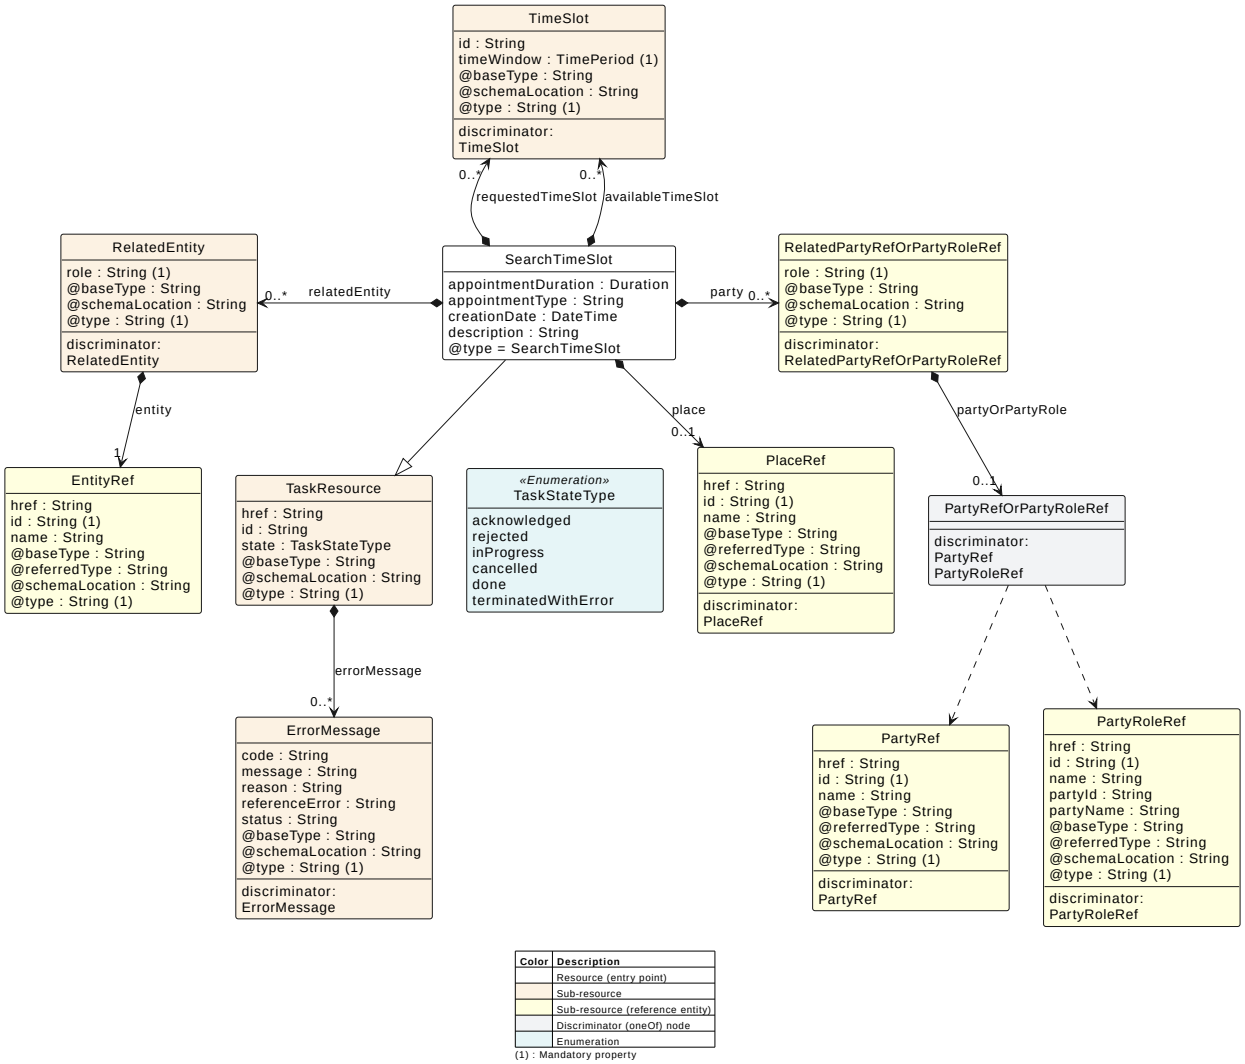

Figure 2 - SearchTimeSlot

Field descriptions

SearchTimeSlot fields

appointmentDuration	A Duration. A time interval in a given unit of time.

© TM Forum 2026. All Rights Reserved.

appointmentType	A String. Specifies the type or category of the appointment based on the nature of the scheduled activities such as: installation, repair, maintenance, consultation and so on.
availableTimeSlot	A TimeSlot [0..*]. The available TimeSlots that result from the search.
creationDate	A DateTime. Date and time when the SearchTimeSlot was created.
description	A String. Description of what would be doing in the Appointment.
errorMessage	An ErrorMessage [0..*]. A list of error message contains the error that caused the termination of the task.
href	A String. Reference to access the search time slot resource.
id	A String. Unique identifier of the search time slot request.
party	A RelatedPartyRefOrPartyRoleRef [0..*]. A reference to the party or party role with whom the Appointment takes place.
place	A PlaceRef. A reference to a physical Place.
relatedEntity	A RelatedEntity [0..*]. A reference to an entity, where the type of the entity is not known in advance. It could be a Customer Interaction or a Service Problem from which the Appointment is being created.
requestedTimeSlot	A TimeSlot [0..*]. The TimeSlot initially requested for the Appointment.
state	A TaskStateType. Possible values for the state of a task. ENUMERATED with values: * acknowledged * rejected * inProgress * cancelled * done * terminatedWithError
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.

© TM Forum 2026. All Rights Reserved.

@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

TimeSlot sub-resource fields

Base Extensible schema for use in TMForum Open-APIs - When used for in a schema it means that the Entity described by the schema MUST be extended with the @type.

See [TimeSlot] for details.

ErrorMessage sub-resource fields

Represents an Error.

code	A String. Error code.
message	A String. More details and corrective actions related to the error.
reason	A String. Explanation of the reason for the error.
referenceError	A String. URI of documentation describing the error.
status	A String. Error code extension like sys-ABC-2001.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

RelatedPartyRefOrPartyRoleRef sub-resource fields

RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.

See [RelatedPartyRefOrPartyRoleRef] for details.

PartyRef sub-resource fields

A Party reference.

See [PartyRef] for details.

PartyRoleRef sub-resource fields

© TM Forum 2026. All Rights Reserved.

Party role reference. A party role represents the part played by a party in a given context.

See [PartyRoleRef] for details.

PlaceRef sub-resource fields

A reference to a physical Place.

See [PlaceRef] for details.

RelatedEntity sub-resource fields

A reference to an entity, where the type of the entity is not known in advance.

See [RelatedEntity] for details.

EntityRef sub-resource fields

Entity reference schema to be use for all entityRef class.

See [EntityRef] for details.

Json representation sample(s)

We provide below a JSON representation as example of the 'SearchTimeSlot' resource object.

    }
  ]
}
```

Notification Resource Models

8 notifications are defined for this API.

Notifications related to Appointment:

- Create Event
- Delete Event
- Attribute Value Change Event
- Status Change Event

Notifications related to SearchTimeSlot:

- Create Event
- Delete Event
- Attribute Value Change Event
- Status Change Event

The notification structure for all notifications in this API follow the pattern depicted by the

© TM Forum 2026. All Rights Reserved.

figure below. A notification event resource (depicted by "SpecificEvent" placeholder) is a sub class of a generic Event structure containing at least an id of the event occurrence (eventId), an event timestamp (eventTime), and the name of the resource (eventType). This notification structure owns an event payload structure ("SpecificEventPayload" placeholder) linked to the resource concerned by the notification using the resource name as access field ("resourceName" placeholder).

API OPERATIONS

Remember the following Uniform Contract:

Operation on Entities	Uniform API Operation	Description
Query Entities	GET Resource	GET must be used to retrieve a representation of a resource.
Create Entity	POST Resource	POST must be used to create a new resource
Partial Update of an Entity	PATCH Resource	PATCH must be used to partially update a resource
Remove an Entity	DELETE Resource	DELETE must be used to remove a resource

Filtering and attribute selection rules are described in the TMF REST Design Guidelines.

Notifications are also described in a subsequent section.

Operations on Appointment

Retrieves a appointment by ID

`GET /appointment/{id}?fields=…`

Description

This operation retrieves an Appointment entity. Attribute selection is enabled for all first level attributes.

Usage samples

Here's an example of a request for retrieving a specific appointment.

Request

```
GET /appointment/21
Content-Type: application/json
```

Response

© TM Forum 2026. All Rights Reserved.

```

Updates partially a appointment

`PATCH /appointment/{id}?fields=…`

Description

This operation allows partial updates of an Appointment entity. Support of json/merge (https://tools.ietf.org/html/rfc7396) is mandatory, support of json/patch (http://tools.ietf.org/html/rfc5789) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the POST operation applies to the PATCH operation. Hence these tables are not repeated here.

Deletes a appointment

`DELETE /appointment/{id}?{filtering}`

Description

This operation deletes an Appointment entity.

© TM Forum 2026. All Rights Reserved.

Usage samples

Here is an example of a request for deleting an appointment.

Request

```
DELETE /appointment/21
Content-Type: application/json
```

Response

```
204
```

Operations on SearchTimeSlot

Retrieves a searchTimeSlot by ID

`GET /searchTimeSlot/{id}?fields=…`

Description

This operation retrieves a SearchTimeSlot entity. Attribute selection is enabled for all first level attributes.

Usage samples

Request

```
GET /searchTimeSlot/99
Content-Type: application/json
```

Response

```
200

{
  "@type": "SearchTimeSlot",

Updates partially a searchTimeSlot

`PATCH /searchTimeSlot/{id}?fields=…`

Description

This operation allows partial updates of a SearchTimeSlot entity. Support of json/merge (https://tools.ietf.org/html/rfc7396) is mandatory, support of json/patch (http://tools.ietf.org/html/rfc5789) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the POST operation applies to the PATCH operation. Hence these tables are not repeated here.

Patchable and Non Patchable Attributes

Non Patchable Attributes	Rule
availableTimeSlot

```

Deletes a searchTimeSlot

`DELETE /searchTimeSlot/{id}?{filtering}`

© TM Forum 2026. All Rights Reserved.

Description

This operation deletes a SearchTimeSlot entity.

Usage samples

Here's an example for deleting a specific SearchTimeSlot.

Request

```
DELETE /searchTimeSlot/21
Content-Type: application/json
```

Response

```
204
```

© TM Forum 2026. All Rights Reserved.

API NOTIFICATIONS

For every single of operation on the entities use the following templates and provide sample REST notification POST calls.

It is assumed that the Pub/Sub uses the Register and UnRegister mechanisms described in the REST Guidelines reproduced below.

Register listener

POST /hub

Description

Sets the communication endpoint address the service instance must use to deliver information about its health state, execution state, failures and metrics. Subsequent POST calls will be rejected by the service if it does not support multiple listeners. In this case DELETE /api/hub/{id} must be called before an endpoint can be created again.

Behavior

Returns HTTP/1.1 status code 204 if the request was successful.

Returns HTTP/1.1 status code 409 if request is not successful.

Usage Samples

Here's an example of a request for registering a listener.

Request

```
POST /api/hub

Accept: application/json

{
    "callback": "http://in.listener.com"
}
```

Response

```
201

Content-Type: application/json

Location: /api/hub/42
```

© TM Forum 2026. All Rights Reserved.

```
{
    "id":"42",
    "callback": "http://in.listener.com",
    "query":""
}
```

Unregister listener

DELETE /hub/{id}

Description

Clears the communication endpoint address that was set by creating the Hub..

Behavior

Returns HTTP/1.1 status code 204 if the request was successful.

Returns HTTP/1.1 status code 404 if the resource is not found.

Usage Samples

Here's an example of a request for un-registering a listener.

Request

```
DELETE /api/hub/42

Accept: application/json
```

Response

```
204
```

Publish Event to listener

POST /client/listener

Description

Clears the communication endpoint address that was set by creating the Hub.

Provides to a registered listener the description of the event that was raised. The /client/listener url is the callback url passed when registering the listener.

© TM Forum 2026. All Rights Reserved.

Behavior

Returns HTTP/1.1 status code 201 if the service is able to set the configuration.

Usage Samples

Here's an example of a notification received by the listener. In this example "EVENT TYPE" should be replaced by one of the notification types supported by this API (see Notification resources Models section) and EVENT BODY refers to the data structure of the given notification type.

Request

```
POST /client/listener

Accept: application/json

{
    "event": {
        EVENT BODY
    },
    "eventType": "EVENT_TYPE"
}
```

Response

```
201
```

For detailed examples on the general TM Forum notification mechanism, see the TMF REST Design Guidelines.
