Introduction

The following document is the specification of the REST API for Sales management. It includes the model definition as well as all available operations.

This API provides interfaces for Sales Lead, Sales Opportunity and the other management capabilities to support the sales activities to build relationship with the prospect customer who could be a person or organization that has an interest in the goods and/or services and possibly become the actual customers with one or more subscriptions.

The Lead corresponds to the nominal result of an interaction involving a prospective customer towards one of offers or services. It is the first stage (S) of the SPANCO process (a six-stage sales methodology originally developed by Rank Xerox to help sales teams convert leads into loyal customers, including: Suspect, Prospect, Analysis, Negotiation, Closure and Order).

A prospect could have expressed a commercial interest or a commercial interest has been detected from his behavior analysis. The Lead Management function enables to collect, evaluate and attribute the leads to the appropriate sales representatives.

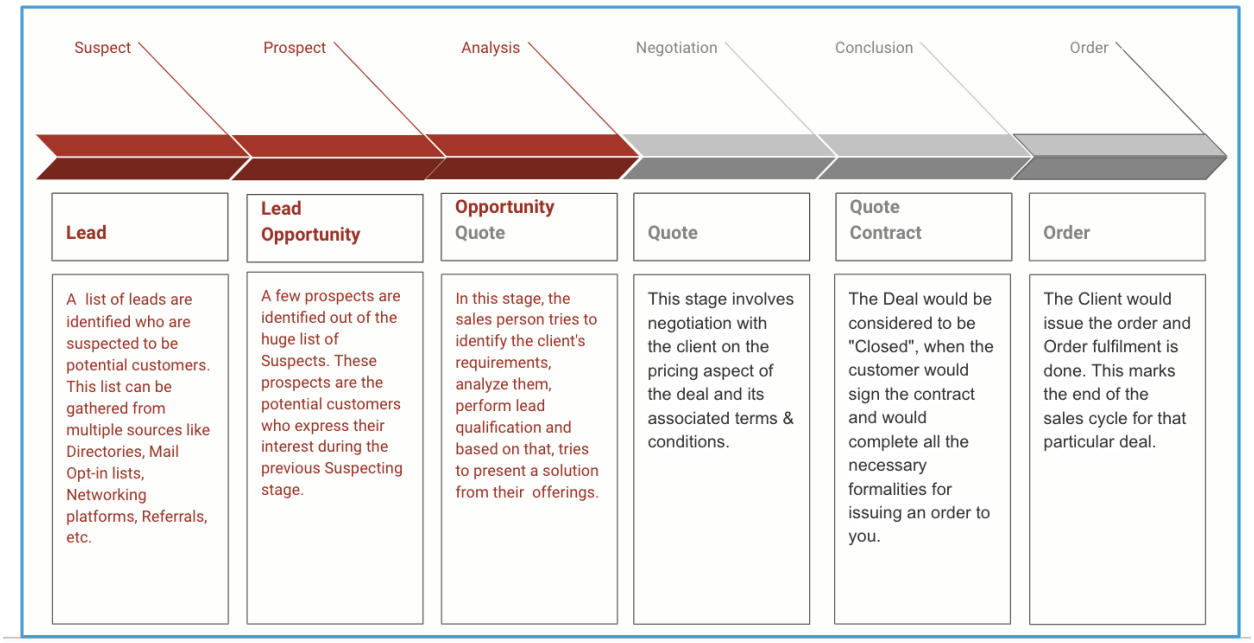

The lead is an interest concerning an offer family or a product line, or expressed literally during an interaction, possibly further to a marketing campaign, and it must be handled and specified to become an opportunity or an order.

In a nominal way, once the interest towards offers or services is confirmed and the prospective customer clearly identified, then along with the customer, an Opportunity is created.

In some cases, for example e-commerce or B2C scenarios, a SalesLead can directly relate to an Order.

The diagram below represents an example of the SPANCO process for B2B Sales -

SAMPLE USE CASES

Reader will find example of use cases using Open APIs in "IG1228 How to use ODA – Using Open APIs to realize Use Cases" document.

Use case 1: A prospect shows interest in a commercial link

Use case 2: A prospect asks for information in a trade show

Use case 3: A prospect is the target of a marketing mailing campaign

© TM Forum 2026. All Rights Reserved.

Use Case 4: A prospect customer is interested in your products. As a Sales Person, you are planning to now meet the customer and understand their requirements, analyze them, perform lead qualification and based on that, tries to present a solution from their offerings. An opportunity is created if the prospect customer is a B2B customer. In cases where the customer is a B2C customer, a product order can be generated based on the interest from the customer

Use Case 5: An existing customer is interested in the some of the other products that your company offers. As a Sales Person, you are planning to now meet the customer and understand their requirements, analyze them and based on that, tries to present a solution from their offerings. As the customer already exists, a new opportunity can be created.

Support of polymorphism and extension patterns

Support of polymorphic collections and types and schema based extension is provided by means of a list of generic meta-attributes that we describe below. Polymorphism in collections occurs when entities inherit from base entities, for instance a BillingAccount and SettlementAccount inheriting properties from the abstract Account entity.

Generic support of polymorphism and pattern extensions is described in the TMF API Guidelines, Part 2 (TMF630).

The @type attribute provides a way to represent the actual class type of an entity. For example, within a list of Account instances some may be instances of BillingAccount where other could be instances of SettlementAccount. The @type gives this information. All resources and sub-resources of this API have a @type attributes that can be provided when this is useful.

The @referredType can be used within reference entities (like for instance an AccountRef object) to explicitly denote the actual entity type of the referred class. Notice that in reference entities the @type, when used, denotes the class type of the reference itself, such as BillingAccountRef or SettlementAccountRef, and not the class type of the referred object. However since reference classes are rarely sub-classed, @type is generally not useful in reference objects.

The @schemaLocation property can be used in resources to allow specifying user-defined properties of an Entity or to specify the expected characteristics of an entity.

The @baseType attribute gives a way to provide explicitly the base of class of a given resource that has been extended.

RESOURCE MODEL

Managed Entity and Task Resource Models

SalesLead resource

A Sales Lead is a record that captures the initial interest expressed by a prospect (an individual or organization) in products or services. As a preliminary artifact in the sales funnel, it contains unverified information that must be nurtured and qualified. A lead is ultimately converted into a Sales Opportunity or is disqualified.

Resource model

Field descriptions

SalesLead fields

agreement	An AgreementRef [0..*]. Array of references to agreements or terms discussed with the prospect as part of this Sales Lead.
category	A CategoryRef. Reference to a category in the catalog.
channel	A ChannelRef. The channel to which the resource reference to. e.g. channel for selling product offerings, channel for opening a trouble ticket etc..
creationDate	A DateTime. Date and time of the salesLead creation.

© TM Forum 2026. All Rights Reserved.

description	A String. Concise and comprehensive description of the Sales Lead.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. Date and time of the last update to the sales Lead.
marketingCampaign	A MarketingCampaignRef. MarketingCampaign reference. Marketing campaign represents the carrier-initiated marketing activity which aims at the better recognition about its brand and offerings by the market.
marketSegment	A MarketSegmentRef. Provides references to the corresponding market segment as target of product offerings. A market segment is grouping of Parties, GeographicAreas, SalesChannels, and so forth.
name	A String [1]. Name of the salesLead.
note	A Note [0..*]. A user-generated text entry providing contextual information or commentary.
priority	A SalesPriorityType. Urgency of working for this sales lead or sales opportunity. ENUMERATED with values: * low * medium * high
product	A ProductRef [0..*]. Reference to the product(s) from the inventory associated with this Sales Lead.
productOffering	A ProductOfferingRef [0..*]. List of product offerings that the prospect has shown interest in or that have been proposed as part of this Sales Lead.
productSpecification	A ProductSpecificationRef [0..*]. List of product specifications related to the Sales Lead, defining the technical and/or functional characteristics of products that could be offered.

© TM Forum 2026. All Rights Reserved.

prospectContactMedium	A ContactMedium [0..*]. List of contact mediums for the prospect, including telephone, email, postal address, or other communication channels through which the prospect can be contacted. ContactMedium can be instantiated as * EmailContactMedium * FaxContactMedium * GeographicAddressContactMedium * PhoneContactMedium * SocialContactMedium
rating	A String. Identifies the potential of a salesLead for becoming a sale. Usual ratings for qualified leads are: hot, warm, cold.
referredDate	A DateTime. Date when the prospect information was received (for example, from a trade show).
relatedParty	A RelatedPartyRefOrPartyRoleRef [0..*]. List of related parties or party roles references associated with this Sales Lead, such as the prospect company, decision-makers, sales or marketing representatives, or other stakeholders involved in the sales process.
revenueEstimate	A RevenueEstimate [0..*]. Estimation of the revenue if the salesLead turns into a sale.
salesLeadType	A String. Indicates the nature of the salesLead, such us: newBusiness, upsell, renewal, cross-sell, etc.
salesOpportunity	A SalesOpportunityRef [0..*]. Reference to the sales opportunity that was created from this Sales Lead once it was qualified and progressed through the sales process.
status	A SalesLeadStateType. Valid values for the lifecycle state of a salesLead resource. ENUMERATED with values: * accepted * acknowledged * cancelled * inProgress * pending * rejected
statusChangeDate	A DateTime. Date and time of the last update of the status.

© TM Forum 2026. All Rights Reserved.

statusChangeReason	A String. Reason why the status has changed.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

AgreementRef sub-resource fields

Agreement reference. An agreement represents a contract or arrangement, either written or verbal and sometimes enforceable by law, such as a service level agreement or a customer price agreement. An agreement involves a number of other business entities, such as products, services, and resources and/or their specifications.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

CategoryRef sub-resource fields

Reference to a category in the catalog.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
version	A String. Version of the category.
@baseType	A String. When sub-classing, this defines the super-class.

© TM Forum 2026. All Rights Reserved.

@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

ChannelRef sub-resource fields

The channel to which the resource reference to. e.g. channel for selling product offerings, channel for opening a trouble ticket etc..

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

MarketingCampaignRef sub-resource fields

MarketingCampaign reference. Marketing campaign represents the carrier-initiated marketing activity which aims at the better recognition about its brand and offerings by the market.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.

© TM Forum 2026. All Rights Reserved.

@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

MarketSegmentRef sub-resource fields

Provides references to the corresponding market segment as target of product offerings. A market segment is grouping of Parties, GeographicAreas, SalesChannels, and so forth.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

Note sub-resource fields

Extra information about a given entity.

author	A String. Author of the note.
date	A DateTime. Date of the note.
id	A String. Identifier of the note within its containing entity.
text	A String. Text of the note.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

ProductRef sub-resource fields

A Product reference.

href	A String. The URI of the referred entity.

© TM Forum 2026. All Rights Reserved.

id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

ProductOfferingRef sub-resource fields

ProductOffering reference. A product offering represents entities that are orderable from the provider of the catalog, this resource includes pricing information.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
version	A String. Version of the product offering.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

ProductSpecificationRef sub-resource fields

ProductSpecification reference. A product Specification represents entities that are orderable from the provider of the catalog.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.

© TM Forum 2026. All Rights Reserved.

targetProductSchema	A TargetProductSchema. The reference object to the schema and type of target product which is described by product specification.
version	A String. Version of the product specification.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

TargetProductSchema sub-resource fields

The reference object to the schema and type of target product which is described by product specification.

@schemaLocation	A Uri [1]. This field provides a link to the schema describing the target product.
@type	A String [1]. Class type of the target product.

ContactMedium sub-resource fields

Indicates the contact medium that could be used to contact the party. This is an abstract base class, the actual value is in one of the strongly-typed subclasses : EmailContact Medium, FaxContactMedium, PhoneContactMedium, GeographicAddressContactMedium, SocialMediaContactMedium...

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.

© TM Forum 2026. All Rights Reserved.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.
	ContactMedium can be instantiated as * EmailContactMedium * FaxContactMedium * GeographicAddressContactMedium * PhoneContactMedium * SocialContactMedium
value	This property is present in subclasses

EmailContactMedium sub-resource fields

Describes an email that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
emailAddress	A String. Full email address in standard format.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

FaxContactMedium sub-resource fields

Describes a fax that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.

© TM Forum 2026. All Rights Reserved.

faxNumber	A String. The fax number of the contact.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

GeographicAddressContactMedium sub-resource fields

Describes a geographical address that could be used to contact a party (an individual or an organization).

city	A String. The city.
contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
country	A String. The country.
geographicAddress	A GeographicAddressRef. Reference to a Geographic Address.
id	A String. Identifier for this contact medium.
postCode	A String. Postcode.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
stateOrProvince	A String. State or province.
street1	A String. Describes the street.
street2	A String. Complementary street description.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.

© TM Forum 2026. All Rights Reserved.

@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

GeographicAddressRef sub-resource fields

Reference to a Geographic Address.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

PhoneContactMedium sub-resource fields

Describes a phone number that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
phoneNumber	A String. The phone number of the contact.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.

© TM Forum 2026. All Rights Reserved.

@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

SocialContactMedium sub-resource fields

Describes a social media identifier that could be used to contact a party (an individual or an organization).

contactType	A String. Type of the contact medium to qualify it like pro email / personal email. This is not used to define the contact medium used.
id	A String. Identifier for this contact medium.
preferred	A Boolean. If true, indicates that is the preferred contact medium.
socialNetworkId	A String. Identifier as a member of a social network.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

RelatedPartyRefOrPartyRoleRef sub-resource fields

RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.

partyOrPartyRole	A PartyRefOrPartyRoleRef.
role	A String [1]. Role played by the related party or party role in the context of the specific entity it is linked to. Such as 'initiator', 'customer', 'salesAgent', 'user'.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

© TM Forum 2026. All Rights Reserved.

PartyRef sub-resource fields

A Party reference.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. ENUMERATED with values: * PartyRef

PartyRoleRef sub-resource fields

Party role reference. A party role represents the part played by a party in a given context.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
partyId	A String. The identifier of the engaged party that is linked to the PartyRole object.
partyName	A String. The name of the engaged party that is linked to the PartyRole object.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. ENUMERATED with values: * PartyRoleRef

RevenueEstimate sub-resource fields

A Revenue Estimate is a projection of the potential revenue that can be generated from a

© TM Forum 2026. All Rights Reserved.

sales opportunity, a sales opportunity item or a sales lead.

amount	A Money [1]. A base / value business entity used to represent money.
description	A String. Concise and comprehensive description of the Revenue Estimate, including the context and the assumptions behind the estimation.
revenueType	A String. Indicates the nature of the revenue, such as recurring, one-time, ongoing, etc.

SalesOpportunityRef sub-resource fields

Sales Opportunity is an 'opportunity' to generate revenue from a Sales Account or Sales Lead. Opportunities are the pending deals that need to be tracked and on which Sales Team plans and executes Sales Activities (Events and Tasks).

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

Json representation sample(s)

We provide below a JSON representation as example of the 'SalesLead' resource object.

SalesOpportunity resource

A Sales Opportunity represents a qualified potential for a sale, created when a prospect demonstrates a concrete and actionable interest. As a formal entry in the sales pipeline, it is tracked with an estimated value, a timeline, and a probability of success. Its lifecycle is managed through defined sales stages until it is won or lost.

Resource model

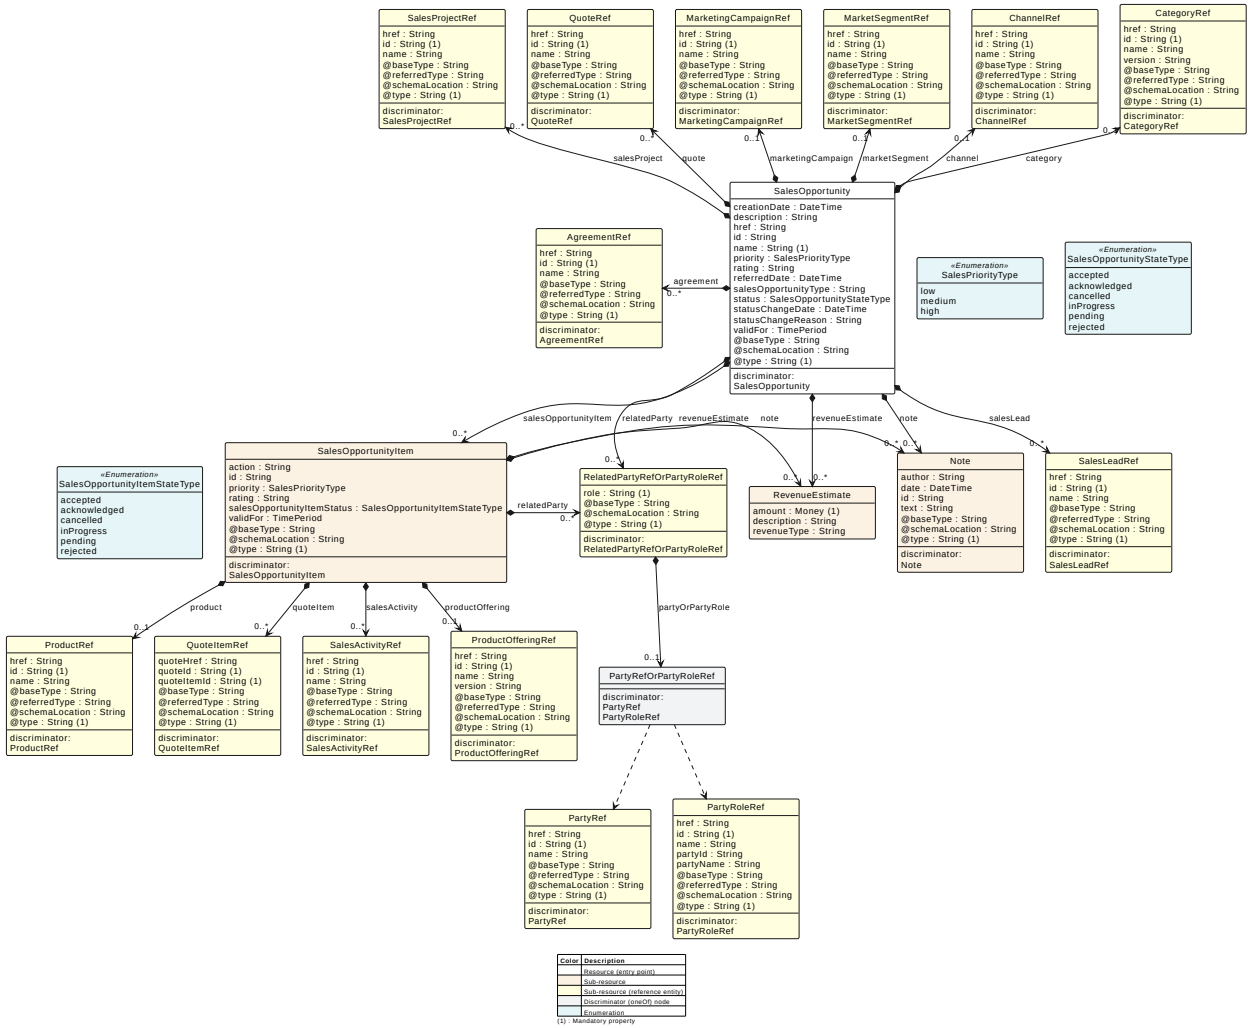

Figure 3 - SalesOpportunity

Field descriptions

SalesOpportunity fields

agreement	An AgreementRef [0..*]. A formal agreement that documents the commercial terms and commitments negotiated and agreed upon during the lifecycle of a sales opportunity.
category	A CategoryRef. Reference to a category in the catalog.
channel	A ChannelRef. The channel to which the resource reference to. e.g. channel for selling product offerings, channel for opening a trouble ticket etc..
creationDate	A DateTime. Date and time of the SalesOpportunity creation.

© TM Forum 2026. All Rights Reserved.

description	A String. Concise and comprehensive description of the SalesOpportunity.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
marketingCampaign	A MarketingCampaignRef. MarketingCampaign reference. Marketing campaign represents the carrier-initiated marketing activity which aims at the better recognition about its brand and offerings by the market.
marketSegment	A MarketSegmentRef. Provides references to the corresponding market segment as target of product offerings. A market segment is grouping of Parties, GeographicAreas, SalesChannels, and so forth.
name	A String [1]. Name of the SalesOpportunity.
note	A Note [0..*]. A user-generated text entry providing contextual information or commentary.
priority	A SalesPriorityType. Urgency of working for this sales lead or sales opportunity. ENUMERATED with values: * low * medium * high
quote	A QuoteRef [0..*]. A formal offer, generated during the sales opportunity lifecycle, that details the proposed products, services, and pricing.
rating	A String. Identifies the potential of the opportunity for becoming a sale, with common values being hot, warm, or cold. This overall rating is typically aggregated from its items, often reflecting the highest potential among them.
referredDate	A DateTime. Date when the prospect information was received (for example, from a trade show).
relatedParty	A RelatedPartyRefOrPartyRoleRef [0..*]. A reference to an involved party, which is identified either by its core entity or by the specific role it plays in the context of the interaction.

© TM Forum 2026. All Rights Reserved.

revenueEstimate	A RevenueEstimate [0..*]. The aggregated and consolidated total value of the revenue estimate for the sales opportunity, which can be derived from the sum of its items or from a specific estimation at the opportunity level.
salesLead	A SalesLeadRef [0..*]. References to the SalesLead resources that gave rise to this SalesOpportunity.
salesOpportunityItem	A SalesOpportunityItem [0..*]. A collection of line items that constitutes the detailed scope of the sales opportunity, with each item specifying a target product or service, its quantity, its estimated value and all specific information.
salesOpportunityType	A String. Indicates the nature of the SalesOpportunity, such us: newBusiness, upsell, renewal, cross-sell, etc.
salesProject	A SalesProjectRef [0..*]. An array of references to sales projects or initiatives to which this opportunity belongs.
status	A SalesOpportunityStateType. Valid values for the lifecycle state of a opportunity resource. ENUMERATED with values: * accepted * acknowledged * cancelled * inProgress * pending * rejected
statusChangeDate	A DateTime. Date and time of the last update of status.
statusChangeReason	A String. Reason why the status has changed.
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

AgreementRef sub-resource fields

© TM Forum 2026. All Rights Reserved.

Agreement reference. An agreement represents a contract or arrangement, either written or verbal and sometimes enforceable by law, such as a service level agreement or a customer price agreement. An agreement involves a number of other business entities, such as products, services, and resources and/or their specifications.

See [AgreementRef] for details.

CategoryRef sub-resource fields

Reference to a category in the catalog.

See [CategoryRef] for details.

ChannelRef sub-resource fields

The channel to which the resource reference to. e.g. channel for selling product offerings, channel for opening a trouble ticket etc..

See [ChannelRef] for details.

MarketingCampaignRef sub-resource fields

MarketingCampaign reference. Marketing campaign represents the carrier-initiated marketing activity which aims at the better recognition about its brand and offerings by the market.

See [MarketingCampaignRef] for details.

MarketSegmentRef sub-resource fields

Provides references to the corresponding market segment as target of product offerings. A market segment is grouping of Parties, GeographicAreas, SalesChannels, and so forth.

See [MarketSegmentRef] for details.

Note sub-resource fields

Extra information about a given entity.

See [Note] for details.

QuoteRef sub-resource fields

Quote reference. It's a Quote that has been executed previously.

href	A String. The URI of the referred entity.

© TM Forum 2026. All Rights Reserved.

id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

RelatedPartyRefOrPartyRoleRef sub-resource fields

RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.

See [RelatedPartyRefOrPartyRoleRef] for details.

PartyRef sub-resource fields

A Party reference.

See [PartyRef] for details.

PartyRoleRef sub-resource fields

Party role reference. A party role represents the part played by a party in a given context.

See [PartyRoleRef] for details.

RevenueEstimate sub-resource fields

A Revenue Estimate is a projection of the potential revenue that can be generated from a sales opportunity, a sales opportunity item or a sales lead.

See [RevenueEstimate] for details.

SalesLeadRef sub-resource fields

Provides references to the corresponding Sales Lead. A Sales Lead is the identification of a person or organization that has an interest in the goods and/or services provided in the prospect of them becoming Customers with one or more Subscriptions.

© TM Forum 2026. All Rights Reserved.

href	A String. Reference of the Sales Lead.
id	A String [1]. Unique identifier of the Sales Lead.
name	A String. Name of the Sales Lead.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. (Class) type of the referred Sales Lead.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

SalesOpportunityItem sub-resource fields

A single line item within a sales opportunity, detailing a specific product or service being offered to the prospect, including its quantity, estimated value and all relevant information.

action	A String. Action to be performed on this SalesOpportunity item.
id	A String. Identifier (index) of the SalesOpportunityItem.
note	A Note [0..*]. Textual information capturing comments, context, or remarks related to the item.
priority	A SalesPriorityType. Urgency of working for this sales lead or sales opportunity. ENUMERATED with values: * low * medium * high
product	A ProductRef. A Product reference.
productOffering	A ProductOfferingRef. ProductOffering reference. A product offering represents entities that are orderable from the provider of the catalog, this resource includes pricing information.
quoteItem	A QuoteItemRef [0..*]. References to the quote items linked to this salesOpportunityItem.
rating	A String. Identifies the potential of the opportunity item for becoming a sale, with common values being hot, warm, or cold.

© TM Forum 2026. All Rights Reserved.

relatedParty	A RelatedPartyRefOrPartyRoleRef [0..*]. A reference to a party or a partyRole involved with this specific item.
revenueEstimate	A RevenueEstimate [0..*]. The estimated revenue for this sales opportunity item, which can be derived from the sum of its components or from a specific estimation at the item level.
salesActivity	A SalesActivityRef [0..*]. References to the sales activity(ies) linked to this salesOpportunityItem.
salesOpportunityItemStatus	A SalesOpportunityItemStateType. Valid values for the lifecycle state of a salesLead resource. ENUMERATED with values: * accepted * acknowledged * cancelled * inProgress * pending * rejected
validFor	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

ProductRef sub-resource fields

A Product reference.

See [ProductRef] for details.

ProductOfferingRef sub-resource fields

ProductOffering reference. A product offering represents entities that are orderable from the provider of the catalog, this resource includes pricing information.

See [ProductOfferingRef] for details.

QuoteItemRef sub-resource fields

© TM Forum 2026. All Rights Reserved.

A reference to Quote item that has been executed previously.

quoteHref	A String. Reference of the related quote.
quoteId	A String [1]. Unique identifier of a refered quote.
quoteItemId	A String [1]. Identifier of a quote item.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

SalesActivityRef sub-resource fields

Provides a reference to the sales activity.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

SalesProjectRef sub-resource fields

Provides a reference to the sales project.

href	A String. The URI of the referred entity.
id	A String [1]. The identifier of the referred entity.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.

© TM Forum 2026. All Rights Reserved.

@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String [1]. When sub-classing, this defines the sub-class Extensible name.

Notification Resource Models

8 notifications are defined for this API.

Notifications related to SalesLead:

- Create Event
- Delete Event
- Attribute Value Change Event
- State Change Event

Notifications related to SalesOpportunity:

- Create Event
- Delete Event
- Attribute Value Change Event
- State Change Event

The notification structure for all notifications in this API follow the pattern depicted by the figure below. A notification event resource (depicted by "SpecificEvent" placeholder) is a sub class of a generic Event structure containing at least an id of the event occurrence (eventId), an event timestamp (eventTime), and the name of the resource (eventType). This notification structure owns an event payload structure ("SpecificEventPayload" placeholder) linked to the resource concerned by the notification using the resource name as access field ("resourceName" placeholder).

API OPERATIONS

Remember the following Uniform Contract:

Operation on Entities	Uniform API Operation	Description
Query Entities	GET Resource	GET must be used to retrieve a representation of a resource.
Create Entity	POST Resource	POST must be used to create a new resource
Partial Update of an Entity	PATCH Resource	PATCH must be used to partially update a resource
Remove an Entity	DELETE Resource	DELETE must be used to remove a resource
Execute an Action on an Entity	POST on TASK Resource	POST must be used to execute Task Resources
Other Request Methods	POST on TASK Resource	GET and POST must not be used to tunnel other request methods.

Filtering and attribute selection rules are described in the TMF REST Design Guidelines.

Notifications are also described in a subsequent section.

Operations on SalesLead

Retrieves a salesLead by ID

`GET /salesLead/{id}?fields=…`

Description

This operation retrieves a SalesLead entity. Attribute selection is enabled for all first level attributes.

Usage samples

Here's a sample of a request for retrieving a sales lead.

Request

© TM Forum 2026. All Rights Reserved.

```
GET /salesLead/123
Content-Type: application/json
```

Response

```

List or find salesLead objects

`GET /salesLead?fields=…&{filtering}`

Description

© TM Forum 2026. All Rights Reserved.

This operation list SalesLead entities. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

Usage samples

Here's an example of a request for retrieving a list of sales leads. The given criteria is the id of the customer Gustavo Fring with the following selected attributes: id, name, description and status.

Request

```
GET /salesLead?filter=relatedParty.id=94587
Content-Type: application/json
```

Response

```

Updates partially a salesLead

`PATCH /salesLead/{id}?fields=…`

Description

This operation allows partial updates of a SalesLead entity. Support of json/merge (https://tools.ietf.org/html/rfc7396) is mandatory, support of json/patch (http://tools.ietf.org/html/rfc5789) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the POST operation applies to the PATCH operation. Hence these tables are not repeated here.

List or find salesOpportunity objects

`GET /salesOpportunity?fields=…&{filtering}`

Description

This operation list SalesOpportunity entities. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

Usage samples

Here's an example of a request for retrieving a list of sales opportunities. The given criteria is the id of the customer and its role.

Request

```
GET /salesOpportunity?filter=status=inProgress
Content-Type: application/json
```

Response

```

Updates partially a salesOpportunity

`PATCH /salesOpportunity/{id}?fields=…`

Description

© TM Forum 2026. All Rights Reserved.

This operation allows partial updates of a SalesOpportunity entity. Support of json/merge (https://tools.ietf.org/html/rfc7396) is mandatory, support of json/patch (http://tools.ietf.org/html/rfc5789) is optional. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the POST operation applies to the PATCH operation. Hence these tables are not repeated here.

Patchable and Non Patchable Attributes

Usage samples

Example to update the status of an opportunity

Request

```
PATCH /salesOpportunity/7894325
Content-Type: application/merge-patch+json

{
  "@type": "SalesOpportunity",
  "name": "GoBank account Sales Opportunity",
  "description": "Opportunity for Gobank Account",
  "status": "pending",
  "statusChangeReason": "more information required for Opportunity to be processed"
}
```

Response

```
200

Here's an example of a request for replace a status to pending for a sales Opportunity . This example illustrates patch using application/json-patch+json.

Request

```
PATCH /salesOpportunity/12345
Content-Type: application/json-patch+json

[
  {
    "op": "replace",
```

© TM Forum 2026. All Rights Reserved.

```
    "path": "/status",
    "value": "pending"
  }
]
```

Response

```
200

{
  "id": "12345",
  "href": "https://serverRoot/tmf-api/salesManagement/v5/salesOpportunity/12345",
  "@type": "SalesOpportunity",
  "name": "GoBank account",
  "status": "pending"
}
```

Here's an example of a request to change the estimated revenue to 1500 . This example illustrates patch using application/json-patch-query+json.

Request

```
PATCH /salesOpportunity/12345
Content-Type: application/json-patch-query+json

[
  {
    "op": "replace",
    "path": "/revenueEstimate?value=1200",
    "value": "1500"
  }
]
```

Response

```
200

{
  "id": "12345",
  "href": "https://serverRoot/tmf-api/salesManagement/v5/salesOpportunity/12345",
  "@type": "SalesOpportunity",
  "name": "GoBank account",
  "description": "Opportunity for Gobank Account",
  "creationDate": "2022-03-30T12:27:59.123Z",
  "rating": "hot",
  "status": "inProgress",
  "revenueEstimate": [
    {
      "amount": {
        "unit": "EUR",
        "value": 1500
```

```
      }
    }
  ]
}
```

Deletes a salesOpportunity

`DELETE /salesOpportunity/{id}?{filtering}`

Description

This operation deletes a SalesOpportunity entity.

Usage samples

Here is an example of a request for deleting a Sales Opportunity.

Request

```
DELETE /salesOpportunity/7894325
Content-Type: application/json
```

Response

```
204
```

© TM Forum 2026. All Rights Reserved.

API NOTIFICATIONS

For every single of operation on the entities use the following templates and provide sample REST notification POST calls.

It is assumed that the Pub/Sub uses the Register and UnRegister mechanisms described in the REST Guidelines reproduced below.

Register listener

POST /hub

Description

Sets the communication endpoint address the service instance must use to deliver information about its health state, execution state, failures and metrics. Subsequent POST calls will be rejected by the service if it does not support multiple listeners. In this case DELETE /api/hub/{id} must be called before an endpoint can be created again.

Behavior

Returns HTTP/1.1 status code 204 if the request was successful.

Returns HTTP/1.1 status code 409 if request is not successful.

Usage Samples

Here's an example of a request for registering a listener.

Request

```
POST /api/hub

Accept: application/json

{
    "callback": "http://in.listener.com"
}
```

Response

```
201

Content-Type: application/json

Location: /api/hub/42
```

© TM Forum 2026. All Rights Reserved.

```
{
    "id":"42",
    "callback": "http://in.listener.com",
    "query":""
}
```

Unregister listener

DELETE /hub/{id}

Description

Clears the communication endpoint address that was set by creating the Hub..

Behavior

Returns HTTP/1.1 status code 204 if the request was successful.

Returns HTTP/1.1 status code 404 if the resource is not found.

Usage Samples

Here's an example of a request for un-registering a listener.

Request

```
DELETE /api/hub/42

Accept: application/json
```

Response

```
204
```

Publish Event to listener

POST /client/listener

Description

Clears the communication endpoint address that was set by creating the Hub.

Provides to a registered listener the description of the event that was raised. The /client/listener url is the callback url passed when registering the listener.

© TM Forum 2026. All Rights Reserved.

Behavior

Returns HTTP/1.1 status code 201 if the service is able to set the configuration.

Usage Samples

Here's an example of a notification received by the listener. In this example "EVENT TYPE" should be replaced by one of the notification types supported by this API (see Notification resources Models section) and EVENT BODY refers to the data structure of the given notification type.

Request

```
POST /client/listener

Accept: application/json

{
    "event": {
        EVENT BODY
    },
    "eventType": "EVENT_TYPE"
}
```

Response

```
201
```

For detailed examples on the general TM Forum notification mechanism, see the TMF REST Design Guidelines.
