Introduction

The following document is the user guide of the REST API for revenue sharing reports management. It includes the model definition as well as all available operations.

© TM Forum 2023. All Rights Reserved.

Sample Use Cases

Reader will find example of use cases using Partner Revenue Sharing Reports API in “Zero-Touch Partnering Use-Cases” document.

© TM Forum 2023. All Rights Reserved.

Support of polymorphism and extension patterns

Support of polymorphic collections and types and schema based extension is provided by means of a list of generic meta-attributes that we describe below. Polymorphism in collections occurs when entities inherit from base entities, for instance a BillingAccount and SettlementAccount inheriting properties from the abstract Account entity.

Generic support of polymorphism and pattern extensions is described in the TMF API Guidelines, Part 2 (TMF630).

The @type attribute provides a way to represent the actual class type of an entity. For example, within a list of Account instances some may be instances of BillingAccount where other could be instances of SettlementAccount. The @type gives this information. All resources and sub-resources of this API have a @type attributes that can be provided when this is useful.

The @referredType can be used within reference entities (like for instance an AccountRef object) to explicitly denote the actual entity type of the referred class. Notice that in reference entities the @type, when used, denotes the class type of the reference itself, such as BillingAccountRef or SettlementAccountRef, and not the class type of the referred object. However since reference classes are rarely sub-classed, @type is generally not useful in reference objects.

The @schemaLocation property can be used in resources to allow specifying user-defined properties of an Entity or to specify the expected characteristics of an entity.

The @baseType attribute gives a way to provide explicitly the base of class of a given resource that has been extended.

Field descriptions

PartyRevSharingReport fields

cdrTransaction	A CdrTransactionRef. A CdrTransactionRef reference.

© TM Forum 2023. All Rights Reserved.

createDate	A DateTime. Date and time when the detail was created.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. Date and time when the detail was last updated.
money	A Money. A base / value business entity used to represent money.
partyRevSharingModel	A PartyRevSharingModelRef. A PartyRevSharingModelRef reference.
partyRevSharingReportItem	A PartyRevSharingReportItem. The PartyRevSharingReportItem list revenue share details related to the specified partner.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

CdrTransactionItemRef sub-resource fields

transactionHref	A String. Reference of the related entity.
transactionId	A String. Unique identifier of a related entity.
transactionItemId	A String. Id of an item of a Cdr transaction.
@referredType	A String. The actual type of the target instance when needed for disambiguation.

CdrTransactionRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

CustomerBillRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.

© TM Forum 2023. All Rights Reserved.

name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PartyAccountRef sub-resource fields

description	A String. Detailed description of the party account.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
status	A String. The condition of the account, such as due, paid, in arrears.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PartyRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PartyRevSharingAlgorithmRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.

© TM Forum 2023. All Rights Reserved.

name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PartyRevSharingModelInvolPriceRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
involPriceId	A String. Id of a price of a revenue sharing model item.
name	A String. Name of the referred entity.
revenueSharingModelId	A String. Unique identifier of a related revenue sharing model.
revenueSharingModelItemId	A String. Unique identifier of a related revenue sharing model item.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PartyRevSharingModelItemRef sub-resource fields

itemId	A String. Id of an item of a revenue sharing model.
revenueSharingModelHref	A String. Reference of the related entity.
revenueSharingModelId	A String. Unique identifier of a related entity.
revenueSharingModelName	A String. Name of the related revenue sharing model.
@referredType	A String. The actual type of the target instance when needed for disambiguation.

PartyRevSharingModelRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.

© TM Forum 2023. All Rights Reserved.

@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PartyRevSharingReportItem sub-resource fields

bill	A CustomerBillRef. Bill reference.
billPeriod	A TimePeriod. A period of time, either as a deadline (endDateTime only) a startDateTime only, or both.
cdrTransactionItem	A CdrTransactionItemRef. Reference of Cdr transaction item.
createDate	A DateTime. Date and time when the detail was created.
href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. Date and time when the detail was last updated.
money	A Money. A base / value business entity used to represent money.
partyAccount	A PartyAccountRef. PartyAccount reference. A party account is an arrangement that a party has with an enterprise that provides products to the party.
partyRevSharingModelItem	A PartyRevSharingModelItemRef. Reference of a party revenue sharing model item.
payment	A PaymentRef. If an immediate payment has been done at the product order submission, the payment information are captured and stored (as a reference) in the order.
relatedParty	A RelatedPartyRefOrPartyRoleRef. RelatedParty reference. A related party defines party or party role or its reference, linked to a specific entity.
sharingReportItemIDetail	A PartyRevSharingReportItemDetail. The PartyRevSharingReportItemDetail list revenue share details related to the specified partner.
status	A String. The status of party revenue Share report item detail.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PartyRevSharingReportItemDetail sub-resource fields

createDate	A DateTime. Date and time when the detail was created.

© TM Forum 2023. All Rights Reserved.

href	A String. Hyperlink reference.
id	A String. Unique identifier.
lastUpdate	A DateTime. Date and time when the detail was last updated.
money	A Money. A base / value business entity used to represent money.
partyRevSharingAlgorithm	A PartyRevSharingAlgorithmRef. The PartyRevSharingModelInvolPrice associated algorithm(s).
partyRevSharingModelInvolPrice	A PartyRevSharingModelInvolPriceRef. A PartyRevSharingAlgorithmRef reference.
product	A ProductRef. The partner product of revenue sharing.
productOffering	A ProductOfferingRef. ProductOffering reference. A product offering represents entities that are orderable from the provider of the catalog, this resource includes pricing information.
productOfferingPrice	A ProductOfferingPriceRef. ProductPriceOffering reference. An amount, usually of money, that is asked for or allowed when a ProductOffering is bought, rented, or leased.
status	A String. The status of party revenue Share report item detail.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PartyRoleRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
partyId	A String. The identifier of the engaged party that is linked to the PartyRole object.
partyName	A String. The name of the engaged party that is linked to the PartyRole object.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

PaymentRef sub-resource fields

© TM Forum 2023. All Rights Reserved.

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

ProductOfferingPriceRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
version	A String. Version of the product offering price.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

ProductOfferingRef sub-resource fields

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
version	A String. Version of the product offering.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

ProductRef sub-resource fields

© TM Forum 2023. All Rights Reserved.

href	A String. Hyperlink reference.
id	A String. Unique identifier.
name	A String. Name of the referred entity.
@baseType	A String. When sub-classing, this defines the super-class.
@referredType	A String. The actual type of the target instance when needed for disambiguation.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

RelatedPartyRefOrPartyRoleRef sub-resource fields

partyOrPartyRole	A PartyRefOrPartyRoleRef.
role	A String. Role played by the related party or party role in the context of the specific entity it is linked to. Such as 'initiator', 'customer', 'salesAgent', 'user'.
@baseType	A String. When sub-classing, this defines the super-class.
@schemaLocation	A String. A URI to a JSON-Schema file that defines additional attributes and relationships.
@type	A String. When sub-classing, this defines the sub-class Extensible name.

Json representation sample(s)

We provide below a JSON representation as example of the 'PartyRevSharingReport' resource object.

Notification Resource Models

4 notifications are defined for this API.

Notifications related to PartyRevSharingReport:

- Party Rev Sharing Report State Change Event
- Party Rev Sharing Report Attribute Value Change Event
- Party Rev Sharing Report Create Event
- Party Rev Sharing Report Delete Event

The notification structure for all notifications in this API follow the pattern depicted by the figure below. A notification event resource (depicted by "SpecificEvent" placeholder) is a sub class of a generic Event structure containing at least an id of the event occurrence (eventId), an event timestamp (eventTime), and the name of the resource (eventType). This notification structure owns an event payload structure ("SpecificEventPayload" placeholder) linked to the resource concerned by the notification using the resource name as access field ("resourceName" placeholder).

API OPERATIONS

Remember the following Uniform Contract:

Operation on Entities	Uniform API Operation	Description
Query Entities	GET Resource	GET must be used to retrieve a representation of a resource.
Create Entity	POST Resource	POST must be used to create a new resource
Partial Update of an Entity	PATCH Resource	PATCH must be used to partially update a resource
Remove an Entity	DELETE Resource	DELETE must be used to remove a resource
Execute an Action on an Entity	POST on TASK Resource	POST must be used to execute Task Resources
Other Request Methods	POST on TASK Resource	GET and POST must not be used to tunnel other request methods.

Filtering and attribute selection rules are described in the TMF REST Design Guidelines.

Notifications are also described in a subsequent section.

Operations on PartyRevSharingReport

Retrieves a PartyRevSharingReport by ID

`GET /partyRevSharingReport/{id}?fields=…`

Description

This operation retrieves a PartyRevSharingReport entity. Attribute selection is enabled for all first level attributes. Filtering may be available depending on the compliance level supported by an implementation.

Usage samples

Here's an example of a request for retrieving a specific party revenue sharing report.

Request

```
GET /partyRevSharingReport/3010
Content-Type: application/json
```

Response

```
200
```

Updates partially a PartyRevSharingReport

`PATCH /partyRevSharingReport/{id}?fields=…`

Description

This operation allows partial updates of a PartyRevSharingReport entity. Support of json/merge (https://tools.ietf.org/html/rfc7386) is mandatory, support of json/patch

© TM Forum 2023. All Rights Reserved.

(http://tools.ietf.org/html/rfc5789) is optiona. Note: If the update operation yields to the creation of sub-resources or relationships, the same rules concerning mandatory sub-resource attributes and default value settings in the POST operation applies to the PATCH operation. Hence these tables are not repeated here.

Patchable and Non Patchable Attributes

Non Patchable Attributes	Rule
href	
id	
@baseType	@baseType is immutable
@schemaLocation	@schemaLocation is immutable
@type	@type is immutable

Patchable Attributes	Rule
cdrTransaction	
createDate	
lastUpdate	
money	
partyRevSharingModel	
partyRevSharingReportItem	

Usage samples

PATCH PartyRevSharingReport request leveraging json application example

Request

```
PATCH /partyRevSharingReport/{id}
Content-Type: application/json

{
  "@type": "PartyRevSharingReport",
  "money": {
      "unit": "USD",
      "value": 240000
    },
    "lastUpdate": "2023-08-10T01:16:34.854Z"
}
```

Response

```
200

PATCH PartyRevSharingReport request leveraging application json-patch-query+json example

Request

```
PATCH /partyRevSharingReport/{id}
Content-Type: application/json-patch-query+json

[
  {
    "op":"replace",
    "path": "/partyRevSharingReportItem.status?id=3021",
    "value": "Unpaid"
  }
]
```

Response

```
200

```

Deletes a PartyRevSharingReport

`DELETE /partyRevSharingReport/{id}`

Description

This operation deletes a PartyRevSharingReport entity.

© TM Forum 2023. All Rights Reserved.

API NOTIFICATIONS

For every single of operation on the entities use the following templates and provide sample REST notification POST calls.

It is assumed that the Pub/Sub uses the Register and UnRegister mechanisms described in the REST Guidelines reproduced below.

Register listener

POST /hub

Description

Sets the communication endpoint address the service instance must use to deliver information about its health state, execution state, failures and metrics. Subsequent POST calls will be rejected by the service if it does not support multiple listeners. In this case DELETE /api/hub/{id} must be called before an endpoint can be created again.

Behavior

Returns HTTP/1.1 status code 204 if the request was successful.

Returns HTTP/1.1 status code 409 if request is not successful.

Usage Samples

Here's an example of a request for registering a listener.

Request

```
POST /api/hub

Accept: application/json

{
    "callback": "http://in.listener.com"
}
```

Response

```
201

Content-Type: application/json

Location: /api/hub/42

{
    "id":"42",
    "callback": "http://in.listener.com",
    "query":""
}
```

© TM Forum 2023. All Rights Reserved.

Unregister listener

DELETE /hub/{id}

Description

Clears the communication endpoint address that was set by creating the Hub..

Behavior

Returns HTTP/1.1 status code 204 if the request was successful.

Returns HTTP/1.1 status code 404 if the resource is not found.

Usage Samples

Here's an example of a request for un-registering a listener.

Request

```
DELETE /api/hub/42

Accept: application/json
```

Response

```
204
```

Publish Event to listener

POST /client/listener

Description

Clears the communication endpoint address that was set by creating the Hub.

Provides to a registered listener the description of the event that was raised. The /client/listener url is the callback url passed when registering the listener.

Behavior

Returns HTTP/1.1 status code 201 if the service is able to set the configuration.

Usage Samples

Here's an example of a notification received by the listener. In this example "EVENT TYPE" should be replaced by one of the notification types supported by this API (see Notification resources Models section) and EVENT BODY refers to the data structure of the given notification type.

Request

© TM Forum 2023. All Rights Reserved.

```
POST /client/listener

Accept: application/json

{
    "event": {
        EVENT BODY
    },
    "eventType": "EVENT_TYPE"
}
```

Response

```
201
```

For detailed examples on the general TM Forum notification mechanism, see the TMF REST Design Guidelines.
